

Environmental policy

Proton Finishing

We shall protect the resources in our environment and thus safeguard long-term economic viability, which means that we shall actively develop our surface treatment activities to reduce their impact on the environment. In addition to applicable environmental laws and other requirements, the business shall be characterized by continuous improvements that we create together with employees, customers and suppliers.

We will protect the resources of the world around us

Through active engagement, we will identify the significant environmental pressures and thereby reduce our impact on the environment.

Ensuring long-term economic viability

Through active and long-term environmental work, we will reduce the risks of environmental impact and thus safeguard economic viability.

Actively develop our surface treatment activities to reduce their impact on the environment

We will develop our surface treatment activities so that they have as little environmental impact as possible within economic, technical and market reasonableness. The significant environmental aspects are in energy, chemicals/metals and waste.

In addition to applicable environmental laws and other requirements, activities shall be characterized by continuous improvement

Operations are monitored and controlled by applicable environmental laws and requirements, and are subject to continuous evaluation and improvement through a systematic approach to pollution prevention.

...that we create together with employees, customers and suppliers

Through close cooperation with customers, suppliers and employees, we will work together to develop surface treatment technology towards a more environmentally friendly industry.

Proton Finishing is one of Europe's leading surface treatment companies in the automotive, construction and other engineering industries. We are located in five locations in Sweden and currently work in a number of different processes in both corrosion protective as well as decorative surface treatments with the highest quality and are at the forefront of environmentally friendly solutions.
